

Air-Eject Dies

RotoMetrics Air-Eject Dies help converters prevent equipment damage and avoid waste build-up inside cavities in a variety of metal-to-metal cutting applications.

Standard Air-Eject Dies

Standard Air-Eject Dies from RotoMetrics, available on dies with several cavities, use compressed air fed to the die to blow out all holes drilled. The compressed air in a Standard Air-Eject Die flows from all of the air jets, with no control over the angle of ejection.

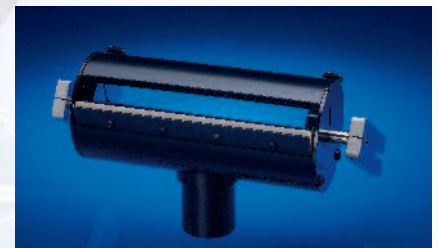

- Prevents equipment damage and avoids waste build-up in a variety of metal-to metal cutting applications
- Uses compressed air fed to the die to blow out all of the holes drilled. (Note: the force of the air blowing through any one hole on a Standard Air-Eject Die is determined by the capacity of the air compressor and the number of air holes on the die.)

Focused Air® Dies

Focused Air Dies from RotoMetrics, available on dies with multiple cavities, also use compressed air to blow out holes drilled, while allowing for a directional flow of air.

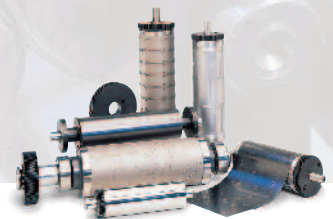

- Features a special probe that fits precisely within the shaft bore, permitting air to be directed at one row of cavities across the web
- Includes a directional arm with the probe, enabling the operator to aim the airflow at a desired angle for precise ejection.

For more information about RotoMetrics Air-Eject Dies and our complete line of rotary tooling, or for answers to your technical questions, contact your RotoMetrics sales representative.

RD Vacuum Boxes

Designed to capture pieces of waste blown out of the web when using a Focused Air Die in a metal-to-metal application, the RD Vacuum Box helps prevent particles from collecting on the anvil roll or accumulating in the drive gears—which could cause unnecessary downtime.
